The Society was founded in 1967 with the aim of promoting the advancement of earth sciences particularly in Malaysia and the Southeast Asian region.

The Society has a membership of about 600 earth scientists interested in Malaysia and other Southeast Asian regions. The membership is worldwide in distribution.
Compositional variation of biotites from a peraluminous magma: example from the Kuala Lumpur granite

AZMAN A. GHANI
Department of Geology
University of Malaya
Kuala Lumpur

Abstract: This work presents new biotite analyses from the Kuala Lumpur granite. The biotites have been analysed from three different samples namely equigranular normal biotite muscovite granite (NBMG), deformed biotite muscovite granite (DBMG) and porphyritic biotite muscovite granite (PBMG). Geochemistry of the biotite is similar to the biotites crystallising from a peraluminous melt, characterised by high Al₂O₃ content. The compositions of the biotites under study were defined by fO₂ near to that of the SiO₂-Fe₂SiO₄-Fep₄ buffer.

INTRODUCTION

The Kuala Lumpur granite is located on the west side of the Main Range batholith. It was emplaced into schists, phyllites and limestones of Silurian and Devonian age. In general, the granite consists of two lobes, that is a smaller lobe to the west of Kuala Lumpur city and the main body to the east of the city. It consists of fine to coarse grained muscovite to biotite granite. Ng (1994) distinguished the Kuala Lumpur granite into four different units that is megacrystic biotite granite (unit 1), megacrystic muscovite-biotite granite (unit 2), equigranular tourmaline-muscovite granite (unit 3) and pegmatite, aplite and microgranite (unit 4). In the granite, biotite is the most important mafic phase and crystallised in wide range of rock types ranging from pegmatite and microgranite to biotite granite. This study will examine the compositions of the biotites from different facies of the Kuala Lumpur granite. Biotites were analysed from three different samples, namely (1) Equigranular biotite-muscovite granite (NBMG) (2) Deformed biotite-muscovite granite (DBMG) collected within the Kuala Lumpur fault zone and (3) porphyritic biotite muscovite granite (PBMG) located within the contact zone (< 10 m) with pelitic rocks. Geochemically the Kuala Lumpur granites are peraluminous with average ACNK value of 1.11 (Ahmad Kamal Sani, 1982). The aims of this paper is to highlight some of the geochemical characteristics of the biotites that crystallized from a peraluminous magma as well as to geochemically differentiate the three samples.

PETROGRAPHY

All three samples have similar mineral contents, that is alkali feldspar, plagioclase, biotite, muscovite, quartz, Fe-Ti oxide and tourmaline. A summary of the petrographic...
features of the three samples are shown in Table 1. Biotite occurs as subhedral to anhedral plates up to 4 mm across. Majority of the biotites are brown in colour except those from the porphyritic biotite-muscovite granite where most of the biotites are reddish in colour. Slight bending and kinking of the plates sometimes occur, especially the biotite from the deformed muscovite granite. Pleochroism scheme range from $Y = \) light brown yellow to pale brown and $X = \) dark brown to foxy red. Incipient replacement by chlorite, along with the secondary epidote and magnetite, is common along crystal margins and cleavages.

Before discussing the chemistry of biotite from the Kuala Lumpur granite, it is necessary to briefly discuss the whole rock geochemistry of the Kuala Lumpur granite. The major and trace elements data for the Kuala Lumpur granite are taken from previous work (Cobbing et al., 1992; Ahmad Kamal Sani, 1982; Azman, unpublished data). The Kuala Lumpur granite is very felsic with $SiO_2 > 71\%$. The rocks are peraluminous with average ACNK value of 1.11. They are also corundum normative (average C $= 1.5$). The geochemistry of the granites indicate

that they are evolved granites which is evident from Rb/Sr ratio (average = 20; Cobbing et al., 1992).

BIOTITE GEOCHEMISTRY

Representative biotite analyses of the Kuala Lumpur granite is given in Table 2. Structural formulae have been calculated on a basis of 22 oxygens. Range of the biotite compositions from all samples are (1) NBMG: SiO₂, 34.53–35.66; TiO₂, 2.77–3.52; Al₂O₃, 18.68–19.06; FeO (total), 21.39–22.95; MgO, 5.53–5.64; Na₂O, 0.19–0.41; K₂O, 8.88–9.55 and BaO, 0.25–0.55. (2) DBMG: SiO₂, 35.03–36.77; TiO₂, 1.68–2.25; Al₂O₃, 18.02–18.72; FeO (total), 24.44–26.71; MgO, 3.41–3.81; Na₂O, 0.22–0.45; K₂O, 8.81–9.27 and BaO, 0.17–0.18. (3) PBMG: SiO₂, 32.88–35.07; TiO₂, 2.6–7.54; Al₂O₃, 17.06–17.6; FeO (total), 22.97–23.98; MgO, 5.88–6.19; Na₂O, 0.20–0.41; K₂O, 6.03–9.43 and BaO, 0.03–0.43. For classification purposes, all the biotites from the Kuala Lumpur granite are plotted in the annite and siderophyllite field (Fig. 1). In general the biotites are all Fe biotite and the majority of the samples plot in the annite field. The biotites from DBMG have low XMg (0.53–0.64%) and those from the DBMG plot nearer to Fe biotite. On a XMg vs Si (Fig. 2), the biotites from the Kuala Lumpur granites plot in the annite and siderophyllite field. The biotites from DBMG have low XMg and the majority of the samples plot in the annite field.

The biotite compositions have a slight deficiency in the Y site (5.38–5.71 based on the 22 p.f.u.) compared to the ideal value (6) in the end members of trioctahedral members. Biotites from the PBMG have low Al³⁺ (0.34 to 0.68 based on the 22 p.f.u.) and those from the DBMG have high Al³⁺ (0.94–1.09, 22 p.f.u.), Fe³⁺ (0.36–0.38, 22 p.f.u.) and Fe⁴⁺ (2.87–3.11, 22 p.f.u.) compared to biotites from the other facies. The X site for the all three facies also varies; PBMG (1.34–2.001, 22 p.f.u.), NBMG (1.86–2.01, 22 p.f.u) and DBMG (1.89–1.94, 22 p.f.u). Variation within crystals also occur, thus biotite from the DBMG, from core to rim TiO₂, Al₂O₃ and FeO decreases whereas MgO increases. Those from the PBMG show an increase of MgO, FeO and BaO from core to rim.

Biotite composition also depends largely upon the nature of the magma (calc-alkaline, peraluminous or alkaline) Abdel Rahman (1994) showed that using several discriminant diagrams (e.g. FeO* vs MgO-Al₂O₃, FeO* vs MgO, Al₂O₃ vs MgO) where FeO* = [FeO + (Fe₂O₃ x 0.89981)], biotite crystallised from different magmas i.e. calc-alkaline, alkaline and peraluminous suites, can be distinguished. Those crystallising from calc-alkaline magma is enriched in MgO content whereas biotite crystallising from a peraluminous magma has high Al₂O₃ content. Whole rock geochemical data of the Kuala Lumpur granites (e.g. Cobbing et al., 1992; Liew, 1983) show that majority of the data plot in peraluminous field in ACNK vs SiO₂ diagram. The biotite from the Kuala Lumpur granite are plotted in the MgO-Al₂O₃ diagram (Abdel Rahman, 1994). Average trend exhibit a negative MgO-Al₂O₃ correlation (Fig. 3). The trend suggest that the 3Mg – 2Al substitution is effective in producing Al-rich biotite crystallising from peraluminous melts (Abdel Rahman, 1994). The plot also show that the biotites from the DBMG sample have the lowest MgO (3.41–3.81%) content compared to those from NBMG (5.53–5.64%) and PBMG (5.88–6.19%) samples.

ESTIMATED OXYGEN FUGACITY ON BIOTITE COMPOSITION

Wones and Eugster (1965) carried out the main investigation of the stability of biotite. They discussed the variations in composition of biotite along the phlogopite-annite join with changing temperature, oxygen fugacity (fO₂) and pressure. The oxygen fugacities were defined by a number of oxygen buffers which included the FeO-Al₂O₃-H₂O (HM), Ni-NiO (NNO) and SiO₂·Fe₂SiO₄·Fe₃O₄·QFM (QFM) buffers. The estimated position of the biotite solid solutions for each of these buffers is shown in Figure 4 together with the composition of the biotite from the Kuala Lumpur granite. As the Fe³⁺ contents were not determined separately, the Fe³⁺ in the biotites were recalculated so that Fe³⁺/(Fe²⁺ + Fe³⁺) = 0.11 (Mason, 1985). The general trend shown by the biotite from the Kuala Lumpur granite is parallel to the estimated

COMPOSITIONAL VARIATION OF BIOTITE FROM A PERALUMINOUS MAGMA

Figure 1. Mg vs Al$^{VI}$ + Fe$^{III}$ + Ti vs Fe$^{II}$ + Mn diagram (Foster, 1960) for biotites from the Kuala Lumpur granite.

Figure 2. XMg vs Si diagram for biotites from the Kuala Lumpur granite.
Figure 3. \( \text{Al}_2\text{O}_3 \) vs \( \text{MgO} \) diagram (after Abdel Rahman, 1994) for biotites from the Kuala Lumpur granite.

Figure 4. The relationship between \( \text{Fe}^{3+} \)-\( \text{Fe}^{2+} \)-Mg contents of biotites from the Kuala Lumpur granite (\( \text{Fe}^{3+} \): calculated values). The estimated position of biotite defining the HM, NNO and QFM oxygen buffer are shown in heavy lines (Wones and Eugster, 1965). All biotites from the three samples use the same symbol.
composition of biotite solid solution for individual buffers. This trend suggests that consanguineous granitoids were buffered during crystallisation, $f_{O_2}$ increasing with decreasing temperature. The plot shows that the compositions of the biotites under study were defined by $f_{O_2}$ near to that of the $SiO_2-Fe_2SiO_4-Fe_3O_4$ buffer (Fig. 4).

CONCLUDING REMARKS

In general, chemistry of the biotite from Kuala Lumpur is similar to the biotite crystallising from a peraluminous melt (Phillips et al., 1981; Speer, 1981; Pattison et al., 1982; Pichavant, 1988). They are characterised by high $Al_{2}O_{3}$ (wt.%). This may suggest that the chemistry of the biotite in the Kuala Lumpur granitic rocks depends largely upon the nature of the magma i.e. peraluminous (cf. Cobbing et al., 1992). However the biotites also show some intersamples variation. Biotites from the DBMG have low $TiO_2$, high $Al_{2}O_{3}$ and those from the PBMG and those from the PBGM have low $Al_{2}O_{3}$, low $Al^{vi}$ and high $Al^{iv}$ and MgO.

Comparison of the biotites from the Kuala Lumpur granites with the biotites from Caledonian granites (British Isles) and Cordilleran granites (North American) show that the biotites from the Kuala Lumpur granite have low Mg and high Fe compared to those from Cordilleran and Caledonian granites. Compared to other trioctahedral mica (e.g. Stone et al., 1998) the biotites from the Kuala Lumpur granite have high FeO and slightly low $K_2O$ contents.

Laporan (Report)

This Malam Air Tanah/"Groundwater Night" was held on Wednesday 21 March 2001 at the Geology Department, University of Malaya, from 5.00 -7.00 pm and attended by 70 participants.

The Groundwater Night turned out to be very successful judging by the large turnout and lively discussions and this goes to show how water has turned out to be a 'hot' commodity these days.

Programme

5.00 - 5.30 pm : Tea
5.30 - 6.00 pm : Some studies on groundwater contamination of the shallow aquifer in the Kelantan River Basin
Mohammed Hatta Abd. Karim (DMG)

6.00 - 6.30 pm : Hydrogeology of the Nenas/Pekan area, Pahang
Ismail Yusoff (UM) & Ismail C. Mohamad (DMG)

6.30 - 7.00 pm : Groundwater issues & challenges — the Malaysian scenario
Saim Suratman (DMG)

G.H. Teh
Some studies on groundwater contamination of the shallow aquifer in the Kelantan River Basin

Mohammed Hatta Abd. Karim

Abstrak (Abstract)

The shallow aquifer system in the Kelantan River delta area constitutes an important source of water supply for domestic purposes and agricultural uses. With increasing human activities and urban development on the surface coupled with the absence of protection zones may risk the aquifer of anthropogenic pollution.

In 1994 a preliminary groundwater contamination study of this shallow aquifer system covering 1,040 square kilometers was initiated to find out the concentration and potential sources of nitrate and other relevant chemical parameters. A total of 605 localities of groundwater samples from dug wells were collected and analysed. The types of land use, types of soil material and well parameters were also recorded in the field.

Further study in 1998 was done to determine the level of organic chemical parameters such as pesticide, phenolic compounds, oil and grease, anionic detergent and other selected inorganic chemical constituents. A total of 101 samples were collected from the tube wells of the Department of Minerals and Geoscience's monitoring network and selected shallow dug wells previously having high nitrate content.

The earlier study showed that the shallow aquifer of the Kelantan River basin is somewhat contaminated locally with nitrate. The background nitrate value from 300 dug wells is 8 mg/l. Thirty five percent of those wells have nitrate higher than background value but only two percent have nitrate greater than 45 mg/l (World Health Organisation's allowable limit for drinking water). In 1998 nitrate content locally increased in some areas along the coast but not in the Kota Bahru town area. The 1998 result did not detect the presence of pesticides (organo-chlorine and organo-phosphorus). However, phenolic compounds, oil and grease and anionic detergents have been detected in the groundwater of the shallow aquifer system. Values of phenolic compounds range between 0.03 mg/l to 0.98 mg/l, oil and grease between 1.3 mg/l to 8.1 mg/l and anionic detergent between 0.25 mg/l to 0.73 mg/l.

Hydrogeology of the Nenasi/Pekan area, Pahang

Ismail Yusoff and Ismail C. Mohamad

Abstrak (Abstract)

Aquaculture activities have numerous impacts on water quality and vice versa. In the Pekan and Nenasi Districts of Peninsular Malaysia, excessive pumping of groundwater for aquaculture activities may result in higher risk of seawater intrusion. The land-ward movement of saltwater generally influences the overall water quality of such coastal aquifer. This presentation concentrations on the results of part of the baseline study on geology and hydrogeology of the area. Water quality data comparison shows evidence of seawater intrusion. Proposed work plan for the next phase of the study including a groundwater model development of the area is also presented. Any constructive comments and suggestions are greatly appreciated.

Groundwater issues & challenges — the Malaysian scenario

Saim Suratman

(No Abstract)
MALAM AIR TANAH
Groundwater Night
The Annual General Meeting 2001 was held at Eastin Hotel, Petaling Jaya at 6.30 pm on the 27th April 2001. It was attended by 26 members.

The Annual Dinner 2001 that followed, was held at the popular Swez Brasserie Coffee House of the hotel.
Minutes of the 34th Annual General Meeting (1999/2000)

Minutes of the 34th Annual General Meeting held at the Geology Lecture Hall, Department of Geology, University of Malaya, Kuala Lumpur at 6.30 pm on the 28th April 2000.

Present:

Abdul Ghani Rafek (Chairman)  
Ahmad Tajuddin Ibrahim (Secretary)  
Che Noorliza Lat  
Abd. Rasid Jaapar

1. Confirmation of the minutes of the previous AGM (1999)

The minutes of the 33rd AGM were passed on the proposal of S. Paramananthan and seconded by Tan Boon Kong with the following amendments:

Page 3, item 6, line 1: ...net ... is corrected to ... nett ...

2. Matters Arising

Geologist’s Act — Dr. J.J. Pereira (IGM Secretary) informed the meeting the Bill has reached the Attorney General’s Chamber for the first time. The Ministry of Primary Industries will take up the Bill as the Ministry’s Bill. She anticipates that it would be presented to the Parliament before the end of this year.

3. President’s Report

Dr. Abdul Ghani Rafek presented the 1999/2000 report on behalf of the Prof. Dr. Ibrahim Komoo, the president who was overseas.

He congratulated and thanked Dr. Tajul Anuar Jamaluddin, the organising chairman of the Annual Geological Conference 1999 and his committee members for their hard work to ensure the success of the Conference. The Society also successfully organised the Petroleum Geology Conference 1999. On behalf of the Society he congratulated Mr. Barney Mahendran and his able committee members for their sincere hard work in organising the Conference. The Society also cooperated with IAEG Malaysian National Group, IGM and LESTARI-UKM to organise the 2nd Asian Symposium on Engineering Geology and the Environment.

Warta Geologi, Vol. 27, No. 2, Mar–Apr 2001
He thanked those who were involved in organising the various activities but voiced his concern that this active participation is limited to a very small number of members only. He also pointed that memberships has declined and asked members to think of practical ways and means to overcome this decline. He stressed that the Warta and Bulletin should be as scheduled and the various Working Groups should be more active. He suggested that the Society should also think of opening its memberships to the non-geologist and for that the identity of the Society would have to be reoriented.

Overall, the 1999/2000 Council has carried out the activities entrusted to them satisfactorily and the Society is very healthy financially due its cautious management of its finances.

Finally he expressed gratitude to all companies, agencies and individuals for their generous sponsorships, donations and support given.

The President’s Report was passed on the proposal of Mr. Ng Tham Fatt and seconded by Mr. Liew Kit Kong.

4. Secretary’s Report

Dr. Ahmad Tajuddin Ibrahim presented his report for the 1999/2000 session. Two amendments was recorded:

Item 4, Society Activities, para 4, line one: “The Working Groups ...” is amended to “Some of the Working Groups ...”.

Item 5, Membership, line 4: “...Robert Tate’s Ph.D. thesis ...” is amended to “...Robert Tate’s M.Sc. thesis ...”.

He reported that the council met almost every month (11 meetings) throughout the 1999/2000 session.

Besides the three major Conferences held as already mentioned in the President’s Report, there were 13 technical talks, 2 forums, 1 dialogue, 1 seminar, 1 workshop and 3 fieldtrips/site visits organised throughout the session.

He also reported that the Society have also agreed to cooperate with KEJORA and the Johor State Government to initiate a geologic gallery at the Muzium Nelayan Tg. Balau, Johor with Dr. Tajul Anuar Jamaluddin chairing the project committee.

He also reported that the Stratigraphic Lexicon is still being completed and the publication of Robert Tate’s M.Sc. thesis in the form of a monograph delayed. Dr. C.P. Lee informed the meeting this thesis is already in the finalised form in CD.

Dr. C.S. Hutchison commented on the non-attendance of one Council Member at its meetings and as his term continues for another year he should be replaced immediately.

The Secretary’s Report was passed on the proposal of Dr. J.J. Pereira and seconded by Mr. Abd Rasid Jaapar.

5. Editor’s Report

Dr. G.H. Teh reported that the Warta Geologi is almost up-to-date with the latest Warta (Mar-Apr 2000) already with the printers.

He reported with regret that the GEOSEA Bulletin (43) could not come out by this AGM as promised. He also reported that the problems with the computer have been sorted out.

Dr. C.S. Hutchison suggested that the computers be replaced rather than upgraded to avoid unnecessary complication.
Mr. S.P. Chen asked why are we doing the formatting ourselves when normally the printers do this? The Editor replied that Ms. Fan is doing the formatting especially the geological part. Dr. J.J. Pereira added that the formatting of maps and diagrams are better done ourselves for better quality control.

Dr. S. Paramananthan asked when can everything be brought up to date? The Editor replied that this would be done in the next few months.

The Editor's report was passed on the proposal of Dr. S. Paramananthan and seconded by Mr. Hamdan Hassan.

6. Treasurer’s and Honorary Auditor’s Reports

Dr. C.P. Lee presented his report. Members corrected the following in the report:

i) Para 2, line 2: RM156,642.99 is corrected to RM163,642.99,

ii) Para 4: RM38,062.88 is corrected to RM45,215.21.

iii) Statement of income and expenditure, expenditure: Study groups is corrected to Working groups.

The Treasurer reported a drop in nett current asset from RM630,425.97 in 1998 to RM566,940.78 in 1999 and the large drop in expenditure from RM178,499.12 in 1998 to RM118,580.11 in 1999 is due to the prepayment of printing bulletin in 1998.

The Treasurer's Report and the Honorary Auditor's Report were passed on the proposal of Dr. S. Paramananthan and seconded by Dr. B.K. Tan.

The meeting reelected Mr. Lee Siew Fatt of S.F. Lee & Co., on the proposal of Dr. C.P. Lee and seconded by Dr. C.S. Hutchison as Honorary Auditor for the 2000/2001 session.

8. Other Matters

a) Proposal for Society’s own building

After a long discussion the meeting agreed that the incoming Council make a proper study of the pros and cons of this issue and requested that the incoming Council come with the proper recommendation at the next AGM.

b) AAPG

Mr. Peter Lloyd who represented the Society at the last AAPG Delegate meeting brought greetings from AAPG and other affiliates of AAPG to the Society. He briefed the meeting on the regionalisation of AAPG and currently he is the President of AAPG Asia Pacific. AAPG support formation of student local chapters. He suggested the formation of a local chapter involving students from UKM and UM and his wife will be sponsoring it.

c) Young Geologist

Mr. Abd Rasid Jaapar brought up the problems faced by young geologists especially in the engineering sector. The meeting agreed that the incoming Council should look into this problem

d) Members Participation in Society Activities.

The President brought the problem of lack of active participation by members in the various activities organised and urged members especially the younger ones be actively involved.

The Council for 2000/2001 shall be as listed below:

Assalamualaikum dan salam sejahtera,

Memandangkan banyaknya kegiatan yang dijalankan oleh Persatuan, adalah sukar untuk difahami mengapa keahlian Persatuan masih menurun pada tahun ini. Usaha mengekalkan keahlian Persatuan masih merupakan cabaran besar yang perlu diberi perhatian yang lebih khusus. Cadangan membina tuan-tuan dan puan-puan untuk mengatasi cabaran ini amatlah dialu-alukan.

Sekian, terima kasih.

Dr. Abdul Ghani Mohd. Rafek
Presiden, Persatuan Geologi Malaysia
1. The Council

Members of the Council of the Geological Society of Malaysia for the period 28th April 2000 to the 27th April 2001 are as follows:

President : Abdul Ghani Rafek (Universiti Kebangsaan Malaysia)
Vice President : Mohd Shafeea Leman (Universiti Kebangsaan Malaysia)
Secretary : Ahmad Tajuddin Ibrahim (University of Malaya)
Assist Secretary : Nik Ramli Nik Hassan (Consultant)
Treasurer : Lee Chai Peng (University of Malaya)
Editor : Teh Guan Hoe (University of Malaya)
Councillors (2-years) :
  - Tajul Anuar Jamaluddin (University of Malaya) (resigned 17.4.2001)
  - Azmi Yakzan (PETRONAS Research & Scientific Services)
  - M. Selvarajah (Mineral & Geoscience Dept.) (resigned 8.1.2001)
  - Chow Weng Sum (Mineral & Geoscience Dept.) (co-opted 9.1.2001)
Councillors (1-year) :
  - Liew Kit Kong (PETRONAS Carigali)
  - Mogana Sundaram (Consultant) (resigned 16.5.2000)
  - Abd Rashid Jaafar (Consultant) (co-opted 17.5.2000)
  - Hamdan Hassan (Consultant)
  - Tan Boon Kong (Universiti Kebangsaan Malaysia)
Immediate Past President : Ibrahim Komoo (Universiti Kebangsaan Malaysia)

2. Council Meetings

Council Meetings were held almost monthly throughout the 2000/2001 session. A total of 11 Council Meetings have been held. Attendances of Council Members at these meetings are as shown in Appendix 1. Three elected Council Members, M. Selvarajah, Mogana Sundaram and Tajul Anuar Jamaluddin resigned. Two of the vacancies created have already been filled up by Abd Rashid Jaafar and Chow Weng Sum. The next Council will take action on the other vacancy. The Council would like to thank M. Selvarajah, Mogana Sundaram and Tajul Anuar Jamaluddin for their services.

3. Memberships

The total membership of the Society as at 31st December 2000 is at 409, showing a substantial decrease from the previous year's total of 468. There are now only 73 members from outside Malaysia, a decrease of 24 from the previous year's total of 97.

Life memberships have increased by 14 to 146. Details of the various classes of memberships and their geographical distributions are shown in Appendix 2.

4. Society Activities

The new session was initiated by the official launching of the National Level Geoscience GSM-DBP Essay Competition on the 29th April 2000 at the Sekolah Alam Shah, Jalan Cheras, Kuala Lumpur. The event was officiated by the Deputy Director General of the Mineral and Geoscience
Department and organised by the Committee on the Promotion of Geoscience to the Public under the chairmanship of Prof. Hamzah Mohamad. A public lecture and a small exhibition were also held in conjunction with the occasion. A similar promotion was also organised at the Maktab Rendah Science MARA, Taiping, Perak on the 8th July, 2000.

The Annual Conference 2000 was successfully held on the 8–10 September in Penang, officiated by the Y.B. Deputy Chief Minister of Penang on behalf of the Y.A.B. Chief Minister. For the first time the Conference proceeding was published and distributed at the Conference itself. The Annual Petroleum Geology Conference 2000 which was also a success, was held on the 22–23 November, 2000 in Kuala Lumpur. This Conference was well supported by the petroleum and the related service companies.

The Society with the help of the various Working Groups were able to organise a total of 2 seminars, 2 forums, one fieldtrip and 16 technical talks throughout this session besides the event already mentioned above. The Society regret that attendance at many of the technical talks organised are very poor with most of the audience made up by students only. This is rather embarrassing especially when a foreign speaker gives the talk. A Photographic Competition was also held which received many quality entries including from students. Details of the Society's activities are shown in the Appendix 3.

5. Publications

The Society regrets that the scheduled annual Bulletins have not been coming out accordingly for a number of years now and the Warta Geologi have also suffered some hiccups. The Council wishes to apologise for this delay which will be explained by the Editor.

Sales of the publications remain sluggish as in previous years. Rocks and Minerals poster is depleting very fast with most of them given away free to secondary schools. Works is still in progress to get the Stratigraphic lexicon finished. The offshore part of this lexicon is yet to be completed. Work to get Robert Tate's monograph published is still proceeding. The Society has also started work to publish a new field guide for Langkawi which will be in an illustrative brochure form. The remaining stock and sales made during the session is as shown in Appendix 4. The Society still continued to maintain a publication exchange with the various professional bodies and libraries from various parts of the world.

6. Acknowledgements

The Society is indeed very much indebted to the generous sponsorships and cooperation received either in kind or otherwise from the many companies, professional societies, government departments, universities, institutions and individuals. We would like to record our special thanks to the Head of the Department of Geology, University of Malaya where the Society's is housed and where most of the activities were held. To all involved, the Society would like to record our sincere appreciation and would hope for continued support to help us continue to promote geoscience as a profession and to the public.

Schlumberger's New Fullbore Formation MicroImager Doubles Your Coverage With Core-Like Clarity

The FMI* fullbore electrical imaging tool makes evaluation of complex reservoirs simpler and quicker than ever before. Its 192 microelectrical sensors give you twice the coverage of previous tools and improved spatial resolution, to 0.2 inches.

The fullbore images enable direct structural analysis and characterization of sedimentary bodies even in extremely complex sequences. The fine detail provided by FMI images allows determination of paleocurrents and rock anisotropy, including the recognition of permeability barriers and paths. And determination of net-to-gross ratio in thin bed sand/shale sequences is automatic.

Understanding the internal structure of the rock can confirm hypotheses regarding its geological evolution and can provide valuable clues to geologists and engineers regarding local porosity and permeability changes. This is possible with the enhanced textural analysis from the new high-resolution sensors, as well as detailed evaluation of fracture networks and other secondary porosity.

Ask to see an example of the new FMI log. You'll be looking at the clearest, most complete picture of the rock available today.

Schlumberger

Value is the difference.

*M mark of Schlumberger-the FMI tool is a MAXIS 500* tool
The Schlumberger Ultrasonic Borehole Imager Detects Openhole Problems and Fractures, Even in Oil-Base Muds.

Accurate, high-resolution, acoustic measurements by the UBI* Ultrasonic Borehole Imager let you examine an openhole for stability problems, deformation and fractures when nonconductive, oil-base muds prevent resistivity measurements. On the same trip, the UBI rotating transducer can check for corrosion and mechanical wear of the internal surface of the casing as the tool is pulled out of the hole.

No other borehole measurement gives you the thin-bed resolution you get with the UBI tool. The images, cross-section plots and pseudo-3D "spiral" plots generated from UBI measurements also reveal keyseats, breakouts, shear sliding and shale alteration to help you avoid the added drilling costs that result from stuck pipe and lost time or equipment. In addition, you get horizontal stress information for mechanical properties evaluations to predict breakouts and perforation stability in unconsolidated sands.

Talk to your Schlumberger representative about detecting openhole problems and fractures acoustically, even in oil-base muds. What UBI images show you could save you time, expense or possibly your well.

*inclusive of free copies to members.
The hard disc of the Society's computer crashed last year and we nearly lost all our data. However, most of the files managed to be saved and we have managed to submit most of the material for the Bulletins and Warta Geologi to the printer.

The Society's delayed publications should be coming out in the next two months.

The first proceedings for the Society's Annual Geological Conference was brought out for the 2000 Conference in Penang. The Society appreciates the effort put in by the Conference Chairperson Dr. Joy P. Periera and her team for the accomplishment.

Each member, again, was given a free, colourful table-top calendar which contained photos from the Society's previous Photographic Competitions.

The Society is grateful to the many authors for their valuable paper contributions, and the donors and advertisers for their valuable financial contributions to the Society's Funds.

Special thanks are due to Ng Tham Fatt and A.K. Fan for assistance in the various editorial processes. The contributions of members of the Editorial Subcommittee and reviewers and advice of members of the Editorial Advisory Board are greatly appreciated.

G.H. Teh
Editor
Honorary Treasurer’s Report 2000

There is an increase in the Society’s nett current asset from RM573,959.11 to RM630,171.03. With the prepaid printing cost of RM100,000 with Art Printing still unused, the actual nett current asset of the Society is RM730,171.03. Our fixed assets have increased from RM31,283.06 to RM44,132.45 because of the purchase of a new computer and printer.

Although there is a drop in income from RM163,795.32 to RM117,421.76, the Society still has an excess of income over expenditure of RM53,011.92 because of the lower expenditure of RM64,409.84. The large drop in expenditure for year 2000 is mainly because we did not pay for any printing cost for bulletin (RM42,000 in 1999) and also had a reduction in the printing of the Warta Geologi (RM6,160.00 compared to RM18,702.20) during the year compared to 1999.

The Society’s finances can continue to increase only because of the generous contributions received from our donors to the Petroleum Geology Conference and Annual Geological Conference. We thank them for their continuous support. The Society would also like to thank our Hon. Auditor, Mr. Lee Sia Fatt, for auditing our accounts.

Lee Chai Peng
Hon. Treasurer
20 March 2000

Notes on Accounts 2000

1. Fixed Deposits
   Our Fixed Deposits totalling RM495,734.99 are in Standard Chartered Bank (RM157,811.23), Public Bank (RM172,062.38) and Mayban Finance (RM165,861.38).

2. Deposit and prepayment is for deposits for telephone (RM300), Telefax (RM300), Student Loan (RM434.64), Geological Evolution of SEA (RM3,215.91), Petroleum Geology Conference 2000 (RM29,819.11), Annual Geological Conference 2001 (RM3,770.14) and Sunto compass (RM5,670).
Auditors' Report to the Members of Persatuan Geologi Malaysia (Geological Society of Malaysia)

We have audited the accounts in accordance with approved auditing standards.

In our opinion, the accounts give a true and fair view of the state of affairs of the Society as at 31st December 2000 and of its income and expenditure and receipts and payments for the year ended on that date.

*Warta Geologi, Vol. 27, No. 2, Mar–Apr 2001*
1. **Society's Building**

This meeting resolved not to continue with the proposed plan to suggest and pay for the construction of another floor above the Klompe Reading Room, Department of Geology, University of Malaya due to the uncertainty in the ownership of the said floor and the high cost involved.

2. **Society's Webpage**

This meeting resolved to have and maintain our very own (selfpaid) webpage.

---

**Council for 2001/2002**

- President: Abd. Ghani Rafek (UKM)
- Vice-President: Mohd Shafiee Leman (UKM)
- Secretary: Ahmad Tajuddin Ibrahim (UM)
- Assistant Secretary: Ismail Yusoff (UM)
- Treasurer: Lee Chai Peng (UM)
- Editor: Teh Guan Hoe (UM)
- Councillors (2-years): Tan Boon Kong (UKM), Liew Kit Kong (PETRONAS Carigali), Abd Rasid Jaapar (Consultant), Wan Fuad W Hassan (UKM)
- Councillors (1-year): Abdul Rahim Samsudin (UKM), Azmi Yakzan (PRSS), Chow Weng Sum (JMG), Vacant
- Immediate Past President: Ibrahim Komoo (UKM)
An encouraging total of 38 entries were received. There was clearly an overall improvement in the quality of the entries. The 3 judges on 17 January 2001 agreed on the following prize winners:

1st Prize (RM1,000) — Lee Chai Peng
2nd Prize (RM500) — Lee Chai Peng
3rd Prize (RM300) — Azman A. Ghani

Consolation Prize (RM100 each):
1. Askury Abd. Kadir
2. Tan Boon Kong
3. Mervyn Onong
4. Ros Fatihah Hj. Mohammad
5. Yeap Soon Wui
6. Siti Aishah bt. Osman

An exhibition of all entries for the GSM Photographic Competition 2000 was held in the Museum, Geology Department, University of Malaya from 10th February till 10th March 2001. To add interest to the exhibition, a competition to match the best 3 entries with that of the judges was held. It turned out to be very popular and the lucky winners of hampers are the following:

1. Ng Ping Ping
2. Ansari Mohd Noh
3. Asmaliah bt. Ahmad
4. Abdul Hadi Abd. Rahman

G.H. Teh
The following applications for membership were approved:

**Full Members**

1. Mohamad Fairus Hassan  
   Terra Geotechnics Sdn. bhd., B1-3, Plaza Dwitasik, Bandar Sri Permaisuri, 56000 Cheras.

2. Yusri Yusop  
   Ceramic Research Co., Lot 7110, Batu 5½, Jalan Kapar, 42100 Klang.

3. Hairunnizam Mohammed Salleh  
   8-3-9 Vista Angkasa, PT-12, Bukit Kerinci, 59200 Kuala Lumpur.

4. Emeliana Rice-Oxley  
   Sarawak Shell Bhd., EPS-WSI, Sarawak Shell Berhad.

5. Engku Nasir Syed Mohamad  
   Expro Group (UK), A-8-4 Megan Phileo Promenade, 189 Jalan Tun Razak 50400 Kuala Lumpur.

6. Aziman Maduri  

7. Lau Yin Leong  
   Ginn-M Corp Sdn. Bhd., Lot 1-55, 1st Floor, Amcorp Mall, 46050 Petaling Jaya.

**Student Members**

1. Chok Pit Yuen  
   Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

2. Mohamad Sharir Mustafa  
   Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

3. Johari Jurid  
   Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

   Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

9. Joinod Oswald  
   Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

10. Nor Kartini Suriati Mansor  
    Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

11. Moniessa Joeahree  
    Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

12. Amirulhizad Bahari  
    Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.

13. Siti Suhana Che Mohamed Sukri  
    Jabatan Geologi, Universiti Malaya, 50603 Kuala Lumpur.
PETUKARAN ALAMAT (Change of Address)

The following members have informed the Society of their new addresses:

1. Ian D. Collins  
   Genting Oil & Gas Ltd., 22nd Flr., Wisma Genting, Jalan Sultan Ismail, 50250 Kuala Lumpur.

2. Ralf Oppermann  
   c/o Shell Todd Oil Services Limited, Private Bag 2035, New Plymouth, New Zealand.

3. Cheong Yaw Peng  
   Curtin University of Technology,  
   Department of Petroleum Engineering,  
   P.O. Box U1987, Perth, Western Australia 6845, Australia.

PERTAMBAHAN BAHARU PERPUSTAKAAN  
(New Library Additions)

The Society has received the following publications:

General Information

Papers should be as concise as possible. However, there is no fixed limit as to the length and number of illustrations. Normally, the whole paper should not exceed 30 printed pages. The page size will be 204 x 280 mm (8 x 11 inches). The final decision regarding the size of the illustrations, sections of the text to be in small type and other matters relating to printing rests with the Editor.

The final decision of any paper submitted for publication rests with the Editor who is aided by a Special Editorial Advisory Board. The Editor may send any paper submitted for review by one or more reviewers. Authors can also include other reviewers' comments of their papers. Scripts of papers found to be unsuitable for publication may not be returned to the authors but reasons for the rejection will be given. The authors of papers found to be unsuitable for publication may appeal only to be Editor for reconsideration if they do not agree with the reasons for rejection. The Editor will consider the appeal together with the Special Editorial Advisory Board.

Unless with the consent of the Editor, papers which have been published before should not be submitted for consideration.

Authors must agree not to publish elsewhere a paper submitted and accepted.

Authors alone are responsible for the facts and opinions given in their papers and for the correctness of references etc.

One set of proofs will be sent to the author (if time permits), to be checked for printer's errors. In the case of two or more authors, please indicate to whom the proofs should be sent.

Twenty-five reprints of each article published are supplied free-of-charge. Additional reprints can be ordered on a reprint order form, which is included with the proofs.

Correspondence: All papers should be submitted to

The Editor (Dr. Teh Guan Hoe)
Geological Society of Malaysia
c/o Geology Department
University of Malaya
50603 Kuala Lumpur
MALAYSIA

Tel: (603) 7957 7036  Fax: (603) 7956 3900

Script Requirements

Scripts must be written in Bahasa Malaysia (Malay) or English.

Two copies of the text and illustrations must be submitted. The scripts must be typewritten double-spaced on paper not exceeding 210 x 297 mm (or 8.27 x 11.69 inches, A4 size). One side of the page must only be typed on.

Figure captions must be typed on a separate sheet of paper. The captions must not be drafted on the figures. The figure number should be marked in pencil on the margin or reverse side.

Original maps and illustrations or as glossy prints should ideally be submitted with sufficiently bold and large lettering to permit reduction to 18 x 25 cm: fold-outs and large maps will be considered only under special circumstances.

Photographs should be of good quality, sharp and with contrast. For each photograph, submit two glossy prints, at least 8 x 12.5 cm and preferably larger. Use of metric system of measurements (SI) is strongly urged wherever possible.

An abstract in English which is concise and informative is required for each paper.

References cited in the text should be listed at the end of the paper and arranged in alphabetical order and typed double-spaced. The name of the book or journal must be in italics. The references should be quoted in the following manner:

Submission of electronic text. In order to publish the paper as quickly as possible after acceptance, authors are requested to submit the final text also on a 3.5" diskette. Both Macintosh and PC (DOS/Windows) platforms are supported. Main text, tables and illustrations should be stored in separate files with clearly identifiable names. Text made with most word processors can be readily processed but authors are advised to provide an additional copy of the text file in ASCII format. Preferred format for illustration is Encapsulated PostScript (EPS) but authors may submit graphic files in their native form. It is essential that the name and version of softwares used is clearly indicated. The final manuscript may contain parts (e.g. formulae, complex tables) or last-minute corrections which are not included in the electronic text on the diskette; however, this should be clearly marked in an additional hardcopy of the manuscript. Authors are encouraged to ensure that apart from any such small last-minute corrections, the disk version and the hardcopy must be identical. Discrepancies can lead to proofs of the wrong version being made.
